Sprint 7 – Usability Testing Report

Group 2: Nhi Dinh, Kim Tran-Do, Tu Dinh

No	Heuristic	Description of the issue	Screenshot	Severity	Suggested Improvement
1	H1-1: Simple & natural dialog	No issue spotted		0	No
2	H1-2: Speak the users' language	Flashcard "difficulty" is labeled as "hard" and "easy," but no explanation is given on how that affects study	Screenshot 1	2	Use tooltips or description: e.g., "Cards marked 'easy' won't appear in next review."
3	H1-3: Minimize users' memory load	Placeholder (prompt) text disappears as soon as the user starts typing. Without a visible label, the user has to remember what the field was asking for	Screenshot 2	3	Add permanent labels above or beside each input field.
		When adding students to a class, email addresses must be typed manually each time.	Screenshot 3		Provide dropdown/auto-complete of registered users to reduce cognitive effort
		For Teacher Mode. Clicking on a class container will open up a new page with unique functionalities, which can also be categorized as "Edit"	Screenshot 4		Remove "View" mode when clicking on the container. Include additional button in "Edit" mode that redirects user to a page to edit class name and description
4	H1-4: Consistency	The "Save" button on the flashcard edit screen is yellow, while on the class edit screen it is blue. This inconsistency may confuse users.	Screenshot 5	2	Use a consistent color and style for all "Save" buttons to reinforce expected behavior.
		Sometimes clicking on a container from the list will open up a page with unique functionalities, sometimes it opens the same page as when clicking on the button on the container	Screenshot 6		Remove "View" mode when clicking on the container when there is a "View" button. For Student Mode
5	H1-5: Feedback	After completing the flashcard or flashcard set creation, the system provides no success message or confirmation	Screenshot 7	3	Display a success notification or toast message indicating an action is completed successfully throughout the application
		After edit flashcard, flashcard set, class, the system provides no success message or confirmation	Screenshot 8		
6	H1-6: Clearly marked exits	No issue spotted		0	No
7	H1-7: Shortcuts	The application does not offer any shortcuts for experienced users. All actions (e.g.,		2	Add basic shortcut features such as: keyboard shortcuts,

		creating flashcards or sets) require multiple manual steps every time.			auto-fill for common entries, or a “duplicate”/“use template” function.
		No keyboard shortcut, for example, "Enter" key for saving inputs			Trigger buttons click on Enter
8	H1-8: Precise & constructive error messages	No issue spotted		0	No
9	H1-9: Prevent errors	The email input field lacks client-side validation. Users can submit the form with an incorrectly formatted email (e.g., missing @ or domain).	Screenshot 9	2	Add real-time validation to the email field to prevent submission unless the input matches a valid email pattern.
10	H1-10: Help and documentation	There's no built-in help menu, FAQ, or onboarding tips for new users.		2	Add a simple Help/FAQ section explaining key features.
